SKILLS 技能

NLP · Computer Vision
Speech Processing
Model Quantization
Model on-device Deployment (Android/iOS/MCU)

EDUCATION 學歷

逢甲大學 Feng Chia Univ.
M.S. Information Engineering
2018 – 2020

B.S. Applied Mathematics
2013 – 2017

SPORTS 運動

Hyrox
Fun dive (Divemaster)
Marathon
Tug of war

AI engineer with 8 years of production machine learning across speech, NLP, and computer vision — currently shipping real-time, on-device(mobile/MCU) audio-related model at Savitech. Equally an educator: 11+ technical talks at Taiwan AI Academy and corporate training for Qualcomm, Taiwan Mobile, and Innolux. Equal parts engineer and educator, with a track record of taking models from paper to product.

EXPERIENCE 工作經歷

Savitech 盛微先進科技 — Senior AI Engineer Jul 2021 – Present
Built the end-to-end personalized HRTF (spatial audio) system; ship real-time, on-device audio models to mobile and MCU targets.

AI Foundation 人工智慧科技基金會 — Instructor Apr 2021 – Apr 2022
Transformer training for engineering staff, whiteboard derivations.

AI4kids — AI Engineer Mar 2021 – May 2021

AI Foundation — AI Engineer Sep 2020 – Mar 2021

Taiwan AI Academy 台灣人工智慧學校 — AI Engineer Jul 2018 – Sep 2020
Three industry projects; 11 technical talks on deep learning and NLP.

SELECTED AI PROJECTS 精選專案

Music Separation — reproduced paper to 10.75 dB vocal cSDR on MUSDB18 (SOTA for on-device-scale models), then ported it to C for mobile and MCU deployment(real-time).

Voice Enhancement — Built the industry's first-in-house 8 kHz → 48 kHz speech bandwidth-extension model, validated by the acoustics team, and ported it to C for deployment on mobile devices and MCUs. (Library size 1.6MB)

Noise Suppression (ENC) — convert model to C and real-time on-MCU noise suppression ; CNN encoder–decoder, quantization, distillation (Library size 200KB+).

Personal Spatial Audio HRTF system — Built an end-to-end system that creates personalized 3D spatial audio (HRTF) from a single photo, from on-device perception models to an automated server pipeline.

> **Image2Mesh** — Reworked MeshTransformer (full-body → face/ear) for single-image 3D mesh reconstruction; built the paired image-to-mesh dataset and trained the model.
>
> **Mesh2HRTF** — Generate 3000+ PHRTF.

Face/Ear Object Landmark Detection — Built the complete pipeline (data collection → annotation → Yolov7 → Android/iOS), delivering real-time Mobile inference.

棒球賽事智能剪輯 — CV auto-extracts pitch/hit clips (InceptionResNet, Bézier curves).

2D-code defect detection — real-time production-line CV inspection.

棒球賽事紀錄轉換數據 — NLP converts CPBL records into structured data.

TEACHING 教學經歷

協助公司導入 Copilot / Claude — training engineer teams on skills, agents, and workflows — cutting time on routine engineering tasks by 75%.

Taiwan AI Academy — 11 talks: Deep Learning, Back-propagation, RNN, Seq2seq, Attention, Transformer, Transformer-XL, XLNet, BERT, GPT-3, PCA.

Corporate — Qualcomm 高通, Taiwan Mobile 台灣大哥大, Innolux 群創光電, Powertech 力成科技, 微程式資訊, 大力卜企業.

Community — Taichung.py, public Transformer Workshop, 逢甲 AI Lab instructor.
